S&K vehicle has something to do with it. Vehicle + brightness are
"remoted" from each other. Vehicle is in open but
"set up" to operate, + is near ~~large~~ or among large vegetation.

inside

5+1/2 caged lights; fixtures; brackets; piner tools; vehicle set up for ops
under ~~factory~~ type conditions if necessary:

Arms, cones, etc. made for function not appearance. Attempt are made to shield it from observation from above, + it is made to look like something other than it is if seen from the ground. It is kept at a distance from all but those closely associated with it to avoid possibility of close ~~at~~ inspection by those unauthorized. It is not intended for extensive movement. It goes where it is needed, then stays in place while operating. Contains lots of equipment - mostly electronic in nature. Part of its purpose requires communications, initiating, monitoring + plotting. Vehicle seems to be involved with some sort of activity involving a sudden intense "very bright" with associated loud, continuous sound + vibrations. Vehicle + source of "flash" are "remoted".
